

HEALTH OCCUPATION STUDENTS

Student Assignment 4/9/2020 - 4/15/2020

Answer the following questions.

1. What methods of cleaning and disinfection should take place daily in our lab after completion of skills besides putting all equipment away? Who's job is it daily in SWP to make sure the lab is clean and everything is in order?
2. The prevention of falls is key in any medical setting to prevent fractures, contusions, and internal bleeding. How can you prevent falls in our #1 Medical Care lab to simulate a hospital or nursing home when taking care of a patient? Think about transfers, use of side rails, dementia, use of medications etc.
3. What are 5 standard precautions for infection control? Do you practice these daily at school, home and activities?
4. What steps do you follow in case of a fire in our lab?
5. Define body mechanics. Why should you practice good body mechanics? Name 3 instances of good body mechanics when caring for a patient.
6. What are the 5 steps upon entering a patient's room and the 4 steps when you leave the room?
7. Review #1 Medical Care student jobs and recommend changes for the 2020-2021 school year.
8. What is Project based learning? Do you feel you learn the content better by project based learning? Ex. Clean Up Your Act.
9. What is work ethic? How do you think Simulated Workplace helps you to improve your work ethic?
